In the Claims:

1-4. (Canceled)

5. (Currently Amended): A method for alerting the pilot of an aircraft to a potential goaround condition comprising the steps of:

monitoring a plurality of parameters indicative of an unstabilized approach; assigning a risk of go-around value according to each of said parameters; summing the assigned risk values; and asserting an alert signal when said summed value exceeds values exceed a predetermined threshold amount.

- 6. (Withdrawn): The method of claim 5 wherein said step of monitoring a plurality of parameters includes the step of monitoring a change in a speed of the aircraft.
- 7. (Withdrawn): The method of claim 5 wherein said step of monitoring a plurality of parameters includes the step of monitoring a runway wind condition.
- 8. (Withdrawn): The method of claim 5 wherein said step of monitoring a plurality of parameters includes the step of monitoring a flight path angle of the aircraft.
- 9. (Original): The method of claim 5 wherein said step of monitoring a plurality of parameters includes the step of monitoring a position of the aircraft.
- 10. (Withdrawn): The method of claim 5 wherein said step of monitoring a plurality of parameters includes the step of monitoring a track of the aircraft.
- 11. (Original): The method of claim 5 wherein said step of asserting an alert signal comprises the step of commanding an autopilot go-around maneuver.
- 12. (Original): The method of claim 5 wherein said step of asserting an alert signal further comprises the steps of:

asserting a go-around caution alert signal when said value exceeds a first threshold amount and is less than a second threshold amount; and

asserting a go-around warning signal when said value exceeds said second threshold amount.

13. (Currently Amended): A method of alerting the pilot of an aircraft to a potential goaround condition comprising the steps of:

monitoring a plurality of parameters indicative of a runway landing length required; assigning a risk of runway overrun value based on for each of said plurality of parameters;

summing the assigned risk values; and

asserting an alert signal when said <u>summed</u> risk value exceeds <u>values exceed</u> a predetermined threshold value,

wherein the plurality of parameters include runway length.

- 14. (Original): The method of claim 13 wherein said step of monitoring a plurality of parameters includes the step of monitoring a deceleration required to stop the aircraft.
- 15. (Withdrawn): The method of claim 13 wherein said step of monitoring a plurality of parameters includes the step of monitoring a runway surface condition.
- 16. (Withdrawn): The method of claim 13 wherein said step of monitoring a plurality of parameters includes the step of monitoring at least one atmospheric condition.
- 17. (Original): The method of claim 13 wherein said step of asserting an alert signal further comprises the steps of:

asserting a go-around caution alert signal when said value exceeds a first threshold amount and is less than a second threshold amount; and

asserting a go-around warning signal when said value exceeds said second threshold amount.

18. (Original): The method of claim 13 wherein said step of asserting an alert signal comprises the step of commanding an autopilot go-around maneuver.

19-20. (Canceled)

- 21. (Currently Amended): A computer program product for alerting the pilot of an aircraft to a potential go-around condition comprising:
 - a computer readable storage medium having computer readable program code means embodied in said medium, said computer readable program code means having:
 - a first computer instruction means for accessing and monitoring a plurality of parameters indicative of an unstabilized approach;
 - a second computer instruction means for assigning a risk of go-around value according to each of said parameters;
 - a third computer instruction means for summing the assigned risk values; and
 - a third fourth computer instruction means for asserting an alert signal when said summed value exceeds values exceed a predetermined threshold amount.
- 22. (Original): The computer program product of claim 21 further comprising a fourth instruction means for asserting an autopilot go-around command when said alert signal is asserted.
- 23. (Currently Amended): A computer program product for alerting the pilot of an aircraft to a potential go around condition comprising:
 - a computer readable storage medium having computer readable program code means embodied in said medium, said computer readable program code means having:
 - a first computer instruction means for accessing and monitoring a plurality of parameters indicative of a runway landing length required;
 - a second computer instruction means for assigning a risk of runway overrun value based on for each of said plurality of parameters;
 - a third computer instruction means for summing the assigned risk values; and

a third fourth computer instruction means for asserting an alert signal when said summed risk value exceeds values exceed a predetermined threshold value.

wherein the plurality of parameters include runway length.

- 24. (Original): The computer program product of claim 23 further including a fourth computer instruction means for asserting an autopilot go-around command when said alert signal is asserted.
- 25. (Currently Amended): An apparatus for alerting the pilot of an aircraft to a potential goaround condition comprising:
 - an input coupled to receive a plurality of parameters useful as indicators of an unstabilized approach;

an output; and

a signal processing device, coupled to said input, and to said output for:

assigning a risk of go-around value according to each of said parameters;

summing the assigned risk values; and

asserting an alert signal when said <u>summed</u> value exceeds <u>values</u> exceed a predetermined threshold amount.

- 26. (Original): The apparatus of claim 25 wherein said apparatus comprises an Enhanced Ground Proximity Warning computer.
- 27. (Original): The apparatus of claim 25 wherein said alert signal further includes signals useful for driving a display.
- 28. (Original): The apparatus of claim 25 wherein said alert signal further includes an aural alert signal.
- 29. (Withdrawn): The apparatus of claim 25 wherein said parameters include a change in a speed of the aircraft.

- 30. (Withdrawn): The apparatus of claim 25 wherein said parameters include a runway wind condition.
- 31. (Withdrawn): The apparatus of claim 25 wherein said parameters include a flight path angle of the aircraft.
- 32. (Original): The apparatus of claim 25 wherein said parameters include a position of the aircraft.
- 33. (Withdrawn): The apparatus of claim 25 wherein said parameters include a track of the aircraft.
- 34. (Original): The apparatus of claim 25 wherein said alert signal comprises an autopilot go-around maneuver command.
 - 35. (Withdrawn): The apparatus of claim 25 further including a database of runway data.
 - 36. (Withdrawn): The apparatus of claim 25 wherein said parameters include runway data.
 - 37. (Original): The apparatus of claim 25 wherein said parameters include terrain data.
- 38. (Currently Amended): An apparatus for alerting the pilot of an aircraft to a potential goaround condition comprising:
 - an input coupled to receive a plurality of parameters useful as indicative of a runway landing length required;

an output; and

a signal processing device, coupled to said input and to said output, for:

assigning a risk of runway overrun value based on to each of said plurality of parameters;

summing the assigned risk values; and

asserting an alert signal when said <u>summed</u> risk value exceeds <u>values exceed</u> a predetermined threshold value,

wherein the plurality of parameters include runway length.

- 39. (Original): The apparatus of claim 38 wherein said parameters include a deceleration required to stop the aircraft.
- 40. (Withdrawn): The apparatus of claim 38 wherein said parameters include a runway surface condition.
- 41. (Withdrawn): The apparatus of claim 38 wherein said parameters include at least one atmospheric condition.
- 42. (Original): The apparatus of claim 38 wherein said apparatus comprises an Enhanced Ground Proximity Warning computer.
- 43. (Original): The apparatus of claim 38 wherein said alert signal further includes signals useful for driving a display.
- 44. (Original): The apparatus of claim 38 wherein said alert signal further includes an aural alert signal.
- 45. (Original): The apparatus of claim 38 wherein said alert signal comprises an autopilot go-around maneuver command.
 - 46. (Withdrawn): The apparatus of claim 38 further including a database of runway data.
 - 47. (Withdrawn): The apparatus of claim 38 wherein said parameters include runway data.
 - 48. (Original): The apparatus of claim 38 wherein said parameters include terrain data.
 - 49-59. (Canceled)
